Selling Internet access using Starlink is easy with Guest Internet
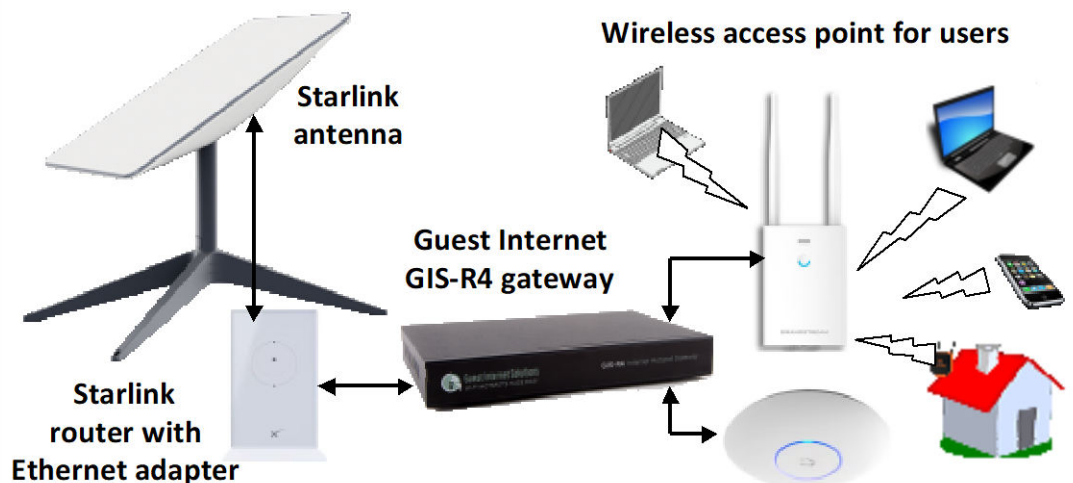

Sell Internet access with Guest Internet

- ❑ Methods of selling the mobile broadband service includes two types of voucher printing for cash sales, and credit card billing. Scratch-off cards are also an option.

- ❑ Install Guest Internet wireless products or install any wireless product connected to a Guest Internet gateway.

- ❑ Install multiple Starlink sites and manage them remotely with the free Guest Internet Cloud service.

- ❑ A user can login to any antenna location with an access code, and then move to a different location and access the Internet using a different antenna with the Guest Internet roaming technology.

- ❑ Access code parameters include; duration of Internet access; maximum download/upload speeds; optional down/up data limits; and optional number of users for one code.

- ❑ Equipment checklist:
  - Starlink antenna
  - GIS-R4, voucher sales
  - Wireless access points

Many parts of the world have no Internet service however there is a big demand for Internet access. Individuals can now start selling low cost Internet anywhere in the world using the Starlink service, and make a good profit.

No technical knowledge is needed using Guest Internet products, just plug the parts together and start selling Internet access. The Guest Internet gateway makes selling Internet access easy and is installed between the Starlink antenna and one or more wireless access points.

Set the Internet speed and data for each customer using the gateway and then print vouchers to sell to customers. The gateway has no customer limit and each Starlink antenna can connect between 25 to 50 people to the Internet. Install multiple Starlink sites and manage each remotely using the free Guest Internet cloud service. Customers using mobile devices can roam between all the antenna sites using one access code. Internet service can be provided to homes by installing an antenna on the roof.
