Community Internet using your ISP: easy to install and operate

Many rural communities around the world had no hope of getting Internet access until now. The Starlink Internet operates almost everywhere in the world and can be shared with homes in a community when the Internet service is managed using a Guest Internet controller. The unique Guest Internet features maintain good Internet performance for many users while ensuring that Starlink requirements are not exceeded.

Provide a service to homes with the STAR-4 kit and your STAR-kit central antenna

The STAR-4 kit is a home installation kit that adds additional homes for the STAR-1, STAR-2 and STAR-6 and STAR-7 kits. The STAR-4 kit has the components to install two homes and includes full installation instructions.

Each STAR-4 kit has two WCW-1 rooftop integrated wireless antenna and receiver, and two WWR-1 wireless routers for installation in the home to provide Internet access. The only additional item required is the Ethernet cable that connects the WCW-1 on the roof to the WWR-1 wireless router in the home. The products are illustrated in the figure below.

Guest Internet equipment is very easy to use so it is not necessary to rely on an 'expert' to operate the system, anyone can do it.

Two products in the STAR-4 kit

**CPE120 client wireless receiver**

IN7620 Wireless router

Items included with the STAR-4 kit

- ❑ A pre-configured home installation kit with a CPE120 home rooftop antenna and IN7620 wireless router

- ❑ Extension Ethernet cable

- ❑ Complete guide, how to connect, configure and provide your Internet service

- ❑ **The ISP Internet service is not included**

The CPE120 antenna must be pointed towards the transmitting antenna and adjusted for good signal strength. The installer has to provide the Ethernet cable that connects the CPE120 on the roof to the IN7620 wireless router installed in the home.

Up to 1Km line of sight

STAR-4 home installation kit

CPE120 client wireless receiver
