- ❑ **No other costs after purchase:** support is free, upgrades are free, no charge for annual software licenses, and no payment processing fees.

TRADE SHOWS

Trade shows require a public Internet Hotspot service for many thousands of visitors, exhibitors and administration staff. Guest Internet gateway products have been successfully deployed at many trade shows with a great user experience, supporting mobile devices and kiosks, with options that include free and paid access. Administrators can have preferential Internet access.

AIRPORTS

Guest Internet products provide a low cost high performance airport public Internet Hotspot service for travelers, staff and concession holders. Tens of thousands of daily travelers can access the Internet with free or charged access, or a two-tier limited free + charged service. The Hotspot infrastructure can also be used by airport staff and concession holders with custom login requirements.

SPORTS STADIUMS

Many thousands of fans can connect to the public Internet Hotspot service with Guest Internet gateways to access sports data, all managed via the free Cloud service. The Internet service can also serve as an interactive marketing tool for sports merchandising.

PUBLIC PARKS

State parks, RV parks and campgrounds all require a public Internet Hotspot service. Guest Internet gateways include features that relieve the burden of configuring and monitoring large wireless distribution networks.

LARGE HOSPITAL NETWORKS

Many hospital groups have deployed Guest Internet gateways to provide a public Internet Hotspot service for patients and visitors. Guest Internet products are popular with hospital IT departments due to low cost, ease of installation and operation, and high reliability.

HOTEL GROUPS

Hotel groups and resorts take advantage of Guest Internet features to provide a high performance public Internet Hotspot service for guests. Hotels can implement a single or multiple tier free/charged service for guests, and can implement preferred guest programs. Guest Internet gateways can interface with the property management system (PMS).
