STAR-10 kit: Sell indoor and outdoor WiFi Internet

A Community Internet WiFi service is easy to install and operate

Many small and rural communities around the world have no access to the Internet. The Guest Internet STAR kits can be used with any ISP service, including satellite services such as Starlink to provide a managed community WiFi service. Satellite Internet can be accessed almost everywhere in the world and can be shared with homes in a community when the Internet service is managed using a Guest Internet controller. The unique Guest Internet features maintain good Internet performance for many users while ensuring that the ISP requirements are not exceeded.

The STAR-10 kit can provide an Internet service for 25 to 50 people when connected to an ISP with 100Mb/s data speed. The GIS-K1 is an economical Internet controller with WiFi for installation indoors. The STAR-10 kit includes the AP120 outdoor wireless access point that connects to the GIS-K1 LAN port. People inside and outside the building can connect to the Internet using the STAR-10 installation kit.

The GIS-K1 sets rules for Internet access so that the service from one ISP, such as a Starlink antenna, can be shared between many people, and will ensure that the ISP data capacity is not exceeded which may result in a service interruption. The rules include the duration of access, maximum data speed, maximum data volume, and time at which the service can be used. Internet access is provided with a voucher that can be printed using the GIS-K1 and the voucher access code has the rules for Internet access.

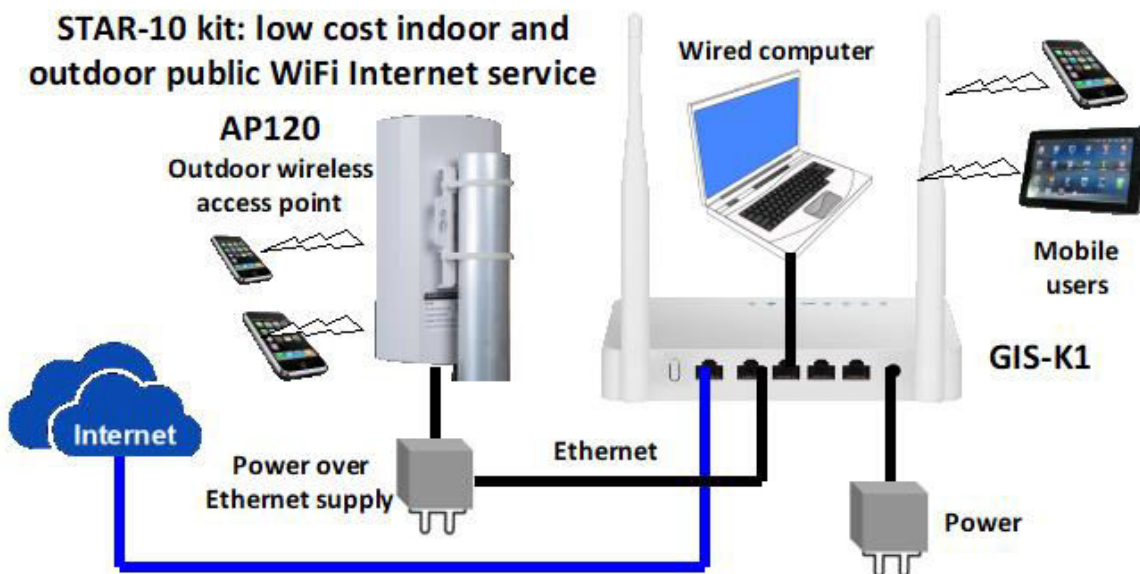

The GIS-K1 Internet controller with WiFi plus the AP120 outdoor wireless access point.

Items included with the STAR-10 kit

- ❑ GIS-K1 Internet controller with indoor WiFi
- ❑ AP120 outdoor wireless access point
- ❑ Extension Ethernet cable
- ❑ Free Cloud account to manage the service
- ❑ Print vouchers using the GIS-K1 or using the Cloud account
- ❑ Complete guide, how to connect, configure and provide your Internet service

Guest Internet has no other charges and the equipment is very easy to use so it is not necessary to rely on an expert to operate the system; anyone can do it. The ISP Internet service is not included with this kit.

Guest Internet features that manage the WiFi community Internet service

Easy to install and use

Comprehensive instructions and simple products mean that you do not have to depend on others to provide the Internet service
