Community Internet using your ISP: easy to install and operate

Rural communities around the world can now get access to the Internet. Starlink Internet operates almost everywhere in the world and can be shared with homes in a community when the Internet service is managed using a Guest Internet controller. The unique Guest Internet features maintain good Internet performance for many users while ensuring that Starlink service terms and conditions are met.

Provide community WiFi Internet with your ISP and the STAR-14 kit

The STAR-14 kit can provide an Internet service for many people when connected to an ISP or Starlink antenna. The Internet service is provided for mobile devices from the GIS-K3 directional antenna. Install the GIS-K3 on a rooftop for the longest range.

The GIS-K3 WiFi controller sets rules for Internet access so that one ISP service can be shared between many people, and to ensure that the ISP's data capacity is not exceeded which may result in a service interruption. The rules include the duration of access, maximum data speed, maximum data volume, and time at which the service can be used. Access is provided with a voucher that can be printed using the GIS-K3 or by using the free Cloud service. The voucher access code has the rules for Internet access. Guest Internet has no other charges and the equipment is very easy to use so it is not necessary to rely on an expert to operate the system; anyone can do it.

The GIS-K3 is an outdoor WiFi controller with wireless that has a directional antenna and has all the features of the Guest Internet family of Internet controllers.
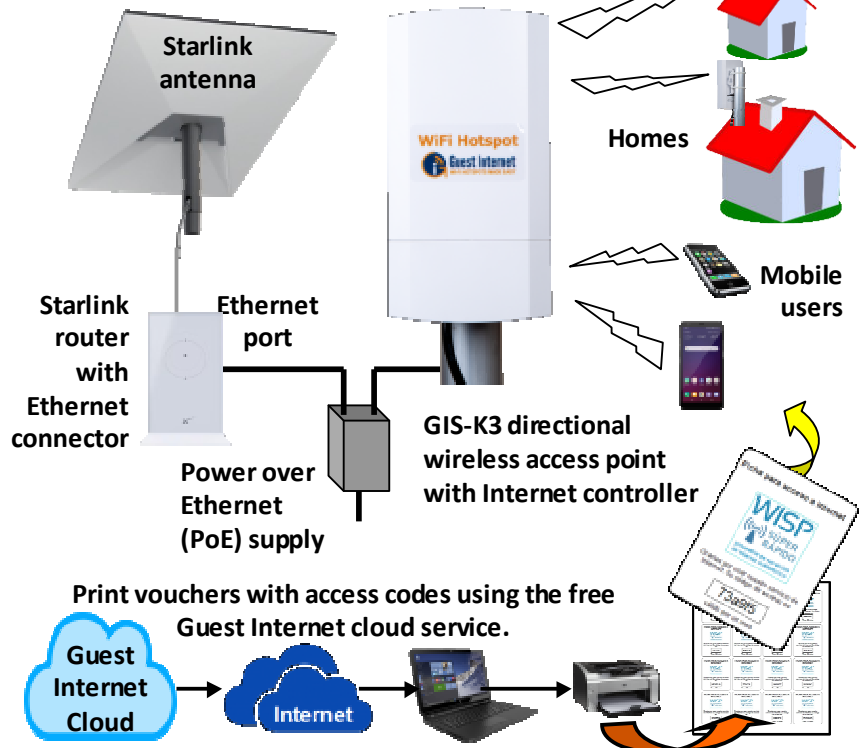

GIS-K3 WiFi controller with wireless

30 degrees vertical beam

60 degrees horizontal beam
